

Journal of the North American Rehabilitation Specialist Ethics Statement

Reporting Standards

Authors of reports of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Evidence and underlying data should be represented accurately in the paper. A paper should contain sufficiently detailed references to permit others to reconstruct its argument. Fraudulent or knowingly inaccurate statements constitute unethical behavior and are unacceptable.

Access and Retention

Authors are asked to provide the raw evidence and data in connection with a paper for editorial review, and should be prepared to provide public access to such evidence (consistent with the ALPSP-STM Statement on Data and Databases), if practicable, and should in any event be prepared to retain such evidence and data for a reasonable time after publication.

Originality and Plagiarism

The authors should ensure that they have written entirely original works, and if the authors have used the work and/or words of others that this has been appropriately cited or quoted.

Multiple, Redundant or Concurrent Publication

An author should not in general publish manuscripts describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behavior and is unacceptable. The journal editor will make every effort to process and evaluate submissions in a timely fashion. Should an author decide to submit the manuscript to another journal, he/she must request the journal editor to withdraw the manuscript from consideration.

Acknowledgement of Sources

Proper acknowledgment of the work of others must always be given. Authors should cite publications that have been influential in determining the scholarly understanding of the question under study.

Authorship of the Paper

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

Disclosure and Conflicts of Interest

All authors should disclose in their manuscript any financial or other substantive conflict of interest that might be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed.

Fundamental errors in published works

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's obligation to promptly notify the journal editor or publisher and cooperate with the editor to retract or correct the paper.

I/we agree to the above statements:
